Jose Jerez

IT Operations | Systems Administration | Automation

josejerez310@yahoo.com | https://github.com/josejerez27

PROFESSIONAL SUMMARY

IT Operations professional specializing in workflow automation, identity management, SaaS administration, and enterprise systems. Experienced supporting a workforce of 3,500-5,000 employees while designing automations, integrations, and operational workflows that improve efficiency, visibility, and service delivery.

SUPPORT & SERVICE DELIVERY

4+ years in IT | 5,600+ tickets resolved | < 2h 30m average resolution | < 12 min average first response | 3,500-5,000 employees supported

SELECTED PROJECTS

Asset Recovery Automation Platform

Designed and implemented an automated asset recovery workflow that generates return labels, tracks equipment status, automates follow-up communications, and improves asset visibility.

Verification Management Workflow

Built a verification workflow with automated intake, applicant tracking, flagged record detection, duplicate prevention, notifications, and dashboard reporting.

SLA Response Automation

Developed automated reminder and escalation workflows that reduced average first-response times from approximately 18-19 minutes to 5-8 minutes.

Distribution List Request Portal

Created a structured request workflow replacing manual Slack requests and improving fulfillment efficiency.
